⚠️ Test Device For Opener Compatibility

1. Power up the DP-WD003, the Red LED is on.
2. Use the included Red & Black wire connect the DP-WD003 to your opener: Put each end to the same terminals as the wall button wires are terminated to.
3. Use a tiny screw or nail to click the button in the DP-WD003, your garage door should activate.

*The Motor and Wall console are not included in the package.

If this test fails, your device may not be compatible. For additional installation instructions and the list of compatible models, please visit our website and contact our support email.
